Docket 2009-489-E

Dear Sirs:

I am writing to expression my concerns and objections to the Weather Normalization Adjustment that SCE&G tacks on to my monthly electric bill. I view this as a back door rate change. The amount added has never equaled the amount subtracted. I have tracked by bill since February 2011. In 28 months they have added \$246.72 and subtracted \$122.02. That means I have been overcharged \$124.02. I am attaching my tracking spreadsheet. I know they claim to have lost 93 million in the first year, but I have my doubts.

In their explanation of the WNA they say it will lower the higher bills and increase the lower bills due to weather not being normal. If you look at my spreadsheet this is a false statement. When my KW usage was up they added. Look at 11-2011 I used 1242 KW and they subtracted \$2.32 and in 1-2012 I used 2082 KW and they added \$25.21 That is just one example. I read some of the reports Jocelyn Boyd of SCE&G sent to PSC saying they received very few questions about WNA so that confirmed the customer education program worked very well. But not until January 2013 did they state the amount of the WNA that was added to the bill. I am sure that was an error on their part. They never wanted anyone to see the actual amounts added or subtracted.

The formula is flawed because SCE&G does not have to return the overcharged amounts to the customer, this results in an increase in rates without PSC approval. I assume this has an expiration date. At which time it will require your approval. I wish to opt out. It really aggravates me when the default position is that I have to opt out instead of opting in.

I Am on Rate 6. I assume each rate has a different WNA.

Sincerely,
Eddie M. Davis

Eddie M. Davis
